

# Cardhub:

A new way to learn and organize anything, with anyone

We always wanted to create something that helps in learning anything quickly and effectively. As we grow up, our skill to memorise important stuff take a toll due to busy schedule and access to internet. We realized one of the best ways we have learnt is through flashcards and it still continues to stand the test of time to teach languages particularly. We wanted to extend this concept to everything one can imagine and help people play quiz, take notes in flashcards form and even share them.

We have made some public quiz on movies, history, languages etc for users to get started. For example, in the movies deck, the front of the card is a description about a movie, and the user can guess which movie it is. Answer are on the back of the card. For the Singlish deck, Singlish words are on the front while the explanations are on the back of the cards. To get a feeling of the fun using Cardhub, visit our web and check out the fun decks in the 'Explore' page! Fork one and start to have fun.

Cardhub provides an easy way for users to create decks and cards, and organise them by tags and colors. You can access your cards on any device by logging in through Facebook. Although our webapp on desktop provides a smooth user experience, our main target is smartphone users. Smartphones make the cards readily accessible because people tend to carry them all the time. Even when there is no internet connection available, you can still use our web App to view the decks and cards. This is very important to Cardhub, because we understand that flashcards are more attractive to the users when there is no internet to distract the users.

Sharing plays a huge part in Cardhub. You can choose to make your decks public so that other people can search your decks by name and fork a copy of your decks. To view and fork the interesting decks out there, simply go to the 'Explore' page. There are some recommended decks in case you don't know what keywords to search for yet. Sharing is also possible on Facebook. You can share your Cardhub profile with all your public decks with your Facebook friends.

Another purpose for sharing is that as more people join, the more value each user can get out of the platform. The UI is kept simple to help users add more content. Once you have people who want to learn a particular topic on our platform, we can allow them to form groups based on that. On top of that, suppose John made a deck on “SAT Vocab”, and it is shared by 500 people on CardHub, John will get the bragging rights on the being the go-to guy for SAT Vocab. People write blogs for the same reasons but writing great blogs require time and it is subjective whereas CardHub is short, simple, and objective so you will know if your content is being shared then you are doing something right.

There are many interesting features that we have thought of but have not had the time to implement in Cardhub. When there are more users, we will recommend the most forked decks to users. We have also considered adding media such as image, video and audio to our cards. It will definitely provide more interesting use cases. They are definitely on our list for future extensions.

Now, time for some interesting decks at <https://cardhub.tk>
